

Virtual Cockpit

Made to work with the global leading patient engagement system Phrazer/Kitsune, the Virtual Cockpit is a secure HIPAA interface for qualified healthcare staff that enables them to track, guide and interact with patients anywhere from anywhere.

As patients engage on Phrazer/Kitsune Systems (PKS), they are immediately visible in the Virtual Cockpit interface. From the interface credentialed care providers are able to:

- see the demographic details of all PKS patients
- patient medical records
- determine the exact location of all patients
- select and initiate CITE medical engagements
- navigate the patients to locations
- engage live chat with patients (any language)
- engage live video with patients (any language)
- collaborate with other providers using the Cockpit
- bring in colleagues on video patient consultations
- and much, much more.

Staff:
 Can see all patients
 Can access and guide
 Is provided decision aids
 Is given process guidance
 Operates at top of licensure

This interface enables smooth augmentation of onsite staff with off-site resources. It can be accessed via Phrazer using credentials, computer, tablet or even an Android or iPhone. It is lightweight, utilizes minimal network resources, is secure and fully reliable.

A secure, highly sophisticated and responsive back-end design enables the Virtual Cockpit. The robust technology, in conjunction with registered patient sets provides the most secure and adaptive platform available.

When combined with the medical grade Phrazer/Kitsune system and Althing Clinic locations the Virtual Cockpit powers the only qualified portal health clinic service.
