

## REALTIME DISTRICT HEALTH DATA

In realtime, the district *Assess - Intervene - Refer/Service* produces actionable and relevant data. Highly granular information includes details on mental health, substance abuse, safety and more that can be reported based on demographic. The data can be sliced to show age, race, gender, socioeconomic background and more. From this highly valuable data districts can derive evidence needed for grants, insights needed for curriculum and where exactly their student/staff health needs further support.

These examples represent only a fraction of the detail reported out to districts by Althing.
